**SECTION 1** 

## **INSTRUCTIONS TO CANDIDATES**

Please read these instructions carefully, but do not open this question paper until you are told that you may do so. This paper is Section 1 of 2.

A separate answer sheet is provided for this paper. Please check you have one. You also require a soft pencil and an eraser.

Please complete the answer sheet with your candidate number, centre number, date of birth, and name.

At the end of 80 minutes, your supervisor will collect this question paper and answer sheet before giving out Section 2.

This paper contains two parts, A and B, and you should attempt both parts.

Part A Mathematics and Physics (28 questions)

Part B Advanced Mathematics and Advanced Physics (26 questions)

This paper contains 54 multiple-choice questions. There are no penalties for incorrect responses, only marks for correct answers, so you should attempt **all** 54 questions. Each question is worth one mark.

For each question, choose the **one** option you consider correct and record your choice on the separate answer sheet. If you make a mistake, erase thoroughly and try again.

You must complete the answer sheet within the time limit.

You can use the question paper for rough working, but **no extra paper** is allowed. Only your responses on the answer sheet will be marked.

Dictionaries and calculators may NOT be used.

## Please wait to be told you may begin before turning this page.

**51** The two functions f and g satisfy

$$f'(x) = ax + g(x)$$

where *a* is a constant.

Given that

$$\int_2^4 g(x) \, \mathrm{d}x = 12$$

and

$$f(4) = 18 + f(2)$$

what is the value of a?

- **B** 3
- **C** 5
- **D** 6
- **E** 15

**52** A load drops from rest through a vertical height h to the ground.

A light cable attached to the load passes over a friction pulley that provides a braking force during the fall.

As the load falls through height h, 50% of the gravitational potential energy lost is transferred into thermal energy.

The load reaches a final speed of  $10 \,\mathrm{m\,s^{-1}}$ .

What is the vertical height h?

(gravitational field strength  $g = 10 \text{ N kg}^{-1}$ ; air resistance can be ignored)

- **A** 0.50 m
- **B** 1.0 m
- **C** 2.0 m
- **D** 2.5 m
- **E** 5.0 m
- **F** 10 m
- **G** 20 m

**53** The dimensions of a solid cuboid, in cm, are x, 2x and y

The volume of the cuboid is  $576 \, \text{cm}^3$ .

At this volume, the surface area of the cuboid has its maximum value.

What is the area, in  $cm^2$ , of the face that has the largest area?

Α	$2(288)^{\frac{2}{3}}$
в	72
С	96
D	432
Е	$4(144)^{\frac{2}{3}}$

54 An object is thrown vertically upwards from ground level with an initial velocity of  $40 \,\mathrm{m \, s^{-1}}$ .

2.0 seconds later another object is released from a height above the ground and falls vertically from rest.

Both of the objects hit the ground at the same time.

From what height above the ground was the second object released?

(gravitational field strength  $g = 10 \text{ N kg}^{-1}$ ; air resistance can be ignored)

- **A** 80 m
- **B** 180 m
- **C** 320 m
- **D** 500 m
- **E** 900 m
